Status:

1. The website has a homepage(index.html) where the description is available. With Login and sign-up sections for the user to log in to the profile/ sign up.
2. The connections button will open the number of matches to attend.
3. In the connections.html page, the name of the matches and in which league the matches will be played are displayed.
4. Upon Clicking the matches, the match(connection.html) details will be shown with date, time, host, location etc., of the match.
5. Upon Clicking start a new match button, it will direct to a form page, when the host/the person organizing match will be entering the details like date, time, host, location etc.

Stopping Point:

1. There is no functionality for the login and signup buttons. Have to implement them.
2. Up on clicking update/delete button. It is redirecting to the connections page. Have to implement them.
3. Up on Clicking the Create Match button it is redirecting to the connections page. Have to implement them.

The challenges I have faced was, there was difficulty while providing redirecting links to the buttons, so I have referred W3 schools to face that challenge.
